

EMR & Patient Booking System

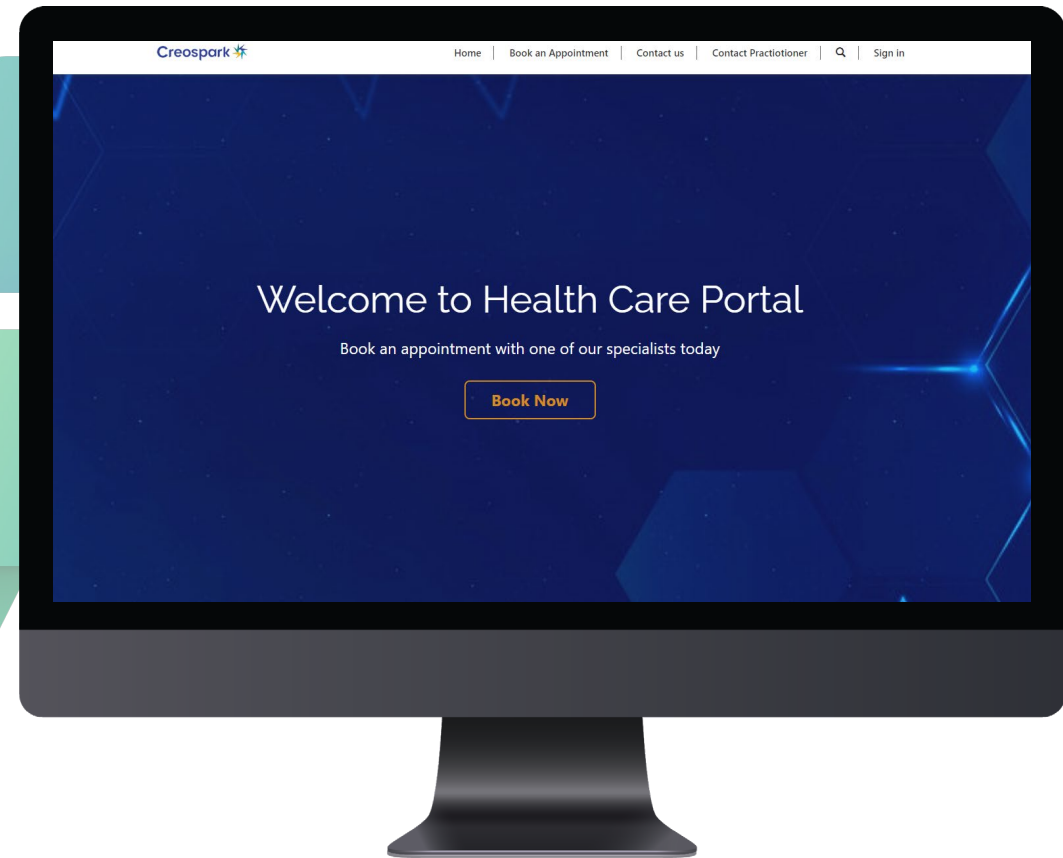

Power Apps solution for medical clinics

Prototype Capability

Our Creospark – Electronic Medical Record and Patient Booking System (EMR) uses the full power of Microsoft 365 and the Power Platform for small and medium sizes health-based organizations to manage medical records for patients and the full patient collaboration life-cycle with clinics and practitioners. Behind the scenes, it uses Microsoft Bookings, Microsoft Teams and Outlook for Business for booking physical and virtual meetings, exchanging emails, managing calendars, patient, practitioner chatting and document storage/exchange. Data is stored in a secured Microsoft for Healthcare based Dataverse database. There is also a model-driven Power App for administration of the system, a canvas-based Power App for Clinic staff to manage patients and a Power Pages based portal for patient login capabilities.

Potential Business Advantage

The Creospark EMR and Patient Booking System digitizes and centralizes medical documents and bookings within tools clients already pay for with their Microsoft 365 Power Platform licensing such as Booking, Teams, Outlook, Calendars and SharePoint – minimizing the learning curve for, using Microsoft Teams as the hub for Teamwork, decreasing Microsoft licensing costs and providing a higher ROI than other EMR systems. There is the opportunity to tailor and self-host existing EMR solutions based on a per customer need for an extra consulting fee hosted on the customer Microsoft 365 tenant using Power App premium licensing.
